Pfannenberg
ELECTRO-TECHNOLOGY FOR INDUSTRY

In keeping with our Audible Signaling Devices line, ICC/Intervox is proud to announce we've become distributors of Audible and Visual Alarms for Industrial Safety from Pfannenberg, a German-owned and engineered line of Industrial Signaling Technologies.

Pfannenberg's heavy duty and versatile audible signaling devices satisfy numerous alarm, warning, and indication requirements. Horns and sirens, also known as "sounders", are self-generating - the tones are pre-programmed into their circuitry and the sound is simply emitted when power is supplied. Their loud acoustic signals (100 dB SPL to 120 dB SPL at the lowest setting) are widely used for generating evacuation alarms in the event of fire, toxic gas leak, or chemical spill. Other applications for sounders include machinery start-up alarms, back-up warning systems, process upset signals, heavy equipment movement, and movement of doors, gates, cranes, and barriers.

Pfannenberg's sounders typically generate a variety of tones that can be user-selected (up to 80 pre-programmed tones). Some units are capable of delivering multiple tone stages. For example, one tone stage may signal evacuation, while a secondary tone stage may signal "all clear" or OK to return.

When audible alarms might go unnoticed due to hearing protection, Pfannenberg Signal Towers Series BR 50 stack lights provide convenient visual indication. They can be combined with audible warning with their easy-to-assemble component architecture that supports up to five interchangeable modules. Choice of visual modules include bright LED and filament lamps for continuous or blinking operation, and hi-visibility flashing xenon tubes.

Pfannenberg Signaling Products come with a 10-year warranty, are SIL certified, ATEX certified, and MED Certified.

With rugged construction and the ability to withstand severe environments, Pfannenberg Signaling Devices are the solutions you can depend upon to protect your employees and processes.
